

Cloudistics Ignite Cloud Platform

PRIVATE CLOUD, PREMIUM EXPERIENCE

In today's cloud centric world, you're asked to choose from two options.

The first, public cloud, is simple to buy. But it comes with spiraling costs and hidden limitations that result in a loss of control and decreasing satisfaction over time.

The second, do-it-yourself private cloud, gives you control over your ecosystem and costs, but is hard to implement and maintain, cutting into the value IT offers.

Cloudistics gives you a premium private cloud experience without the downsides of other cloud technologies. By choosing our Cloudistics Ignite Cloud Platform, you get the simplicity and agility of the public cloud behind your firewall, without losing control. We take you beyond other approaches for better satisfaction and better outcomes.

Based on open source technologies, the Cloudistics Ignite platform makes hardware invisible and composes network, compute, and storage on demand as your applications demand it. You get to focus on business need, not hardware and management.

Your business runs on applications. That's why we integrated an Application Marketplace into the product. With templates from leading vendors, you can create an IT operating system and application ecosystem in minutes instead of hours.

PARTNERS

“Turn-key solution for rapid delivery of applications”

Gartner

“The first true software defined infrastructure”

IDC

CLOUDISTICS WILL ALWAYS DELIVER:

- 1 CLOUD MANAGEMENT**

Manage your private cloud, from the cloud, delivering overall control, orchestration and management from an HTML 5 based SaaS portal, freeing CPU, memory, and storage space for your applications.
- 2 CLOUDISTICS APPLICATION MARKETPLACE**

With it, you have a library of enterprise applications templates ready for deployment in minutes instead of hours. The templates are regularly updated by Cloudistics to keep you in sync with the latest and greatest capabilities.
- 3 SINGLE PANE OF GLASS**

The entire Ignite Cloud Platform is managed and controlled from one vanity web address. No longer do you need a console for each component within your data center. Manage your private cloud, like the public cloud.
- 4 LIMITLESS SCALE**

Cloudistics delivers resources in a clusterless fashion and we federate all compute, memory, and storage, so no limitations like clustered environments or file-systems.
- 5 SELF SERVICE & MULTITENANCY**

Cloudistics creates pools of resources and allows those pools to be carved, thin provisioned, and delivered to tenants within the platform. Remove the temptation of 'shadow IT' by delivering a solution that addresses the speed and agility requirements of the most demanding users.
- 6 EARLYSENSE SUPPORT**

Get proactive and interactive support with a single point of contact, phone-home proactive parts dispatch, chat support within the cloud controller and single click log collection and retrieval.
- 7 A TURNKEY PLATFORM**

Cloudistics gives you a private cloud -- hardware, software, compute, storage, and networking, all for one price -- cables, application templates, and support included.
- 8 AUTOMATIC UPDATES**

Don't manage hardware--when updates are available, users are presented with the option to deploy software and hardware updates in a non-disruptive manner.
- 9 NO HYPERVISOR TAX**

Looking to reduce annual costs associated with your hypervisor? We offer an all-inclusive virtualized platform, including the hypervisor!
- 10 MULTI-SITE PROTECTION**

Lets you set up multi-site snapshots and replication for all-inclusive backup, disaster recovery and business continuity.
